Feature 1

First thing we have on our restaurant website is a sign in option for existing customers and a sign up button for new customers.

This is how the login and sign up pages look:

RestoraBD Registration

Name
example: John Doe

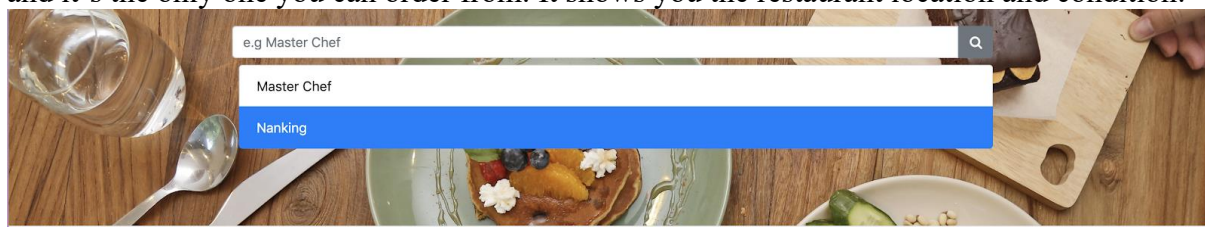

Phone
example: 01744593190

Password
example: h!j&@#b!j25*#

[Register](#)

Already a member? [Sign in now](#)

Then, once you login it gives you the option to search for a restaurant and also shows you the active restaurants in this system. So we just have one ACTIVE restaurant called Foodie Villa and it's the only one you can order from. It shows you the restaurant location and condition:

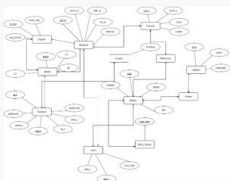

e.g Master Chef

Master Chef

Nanking

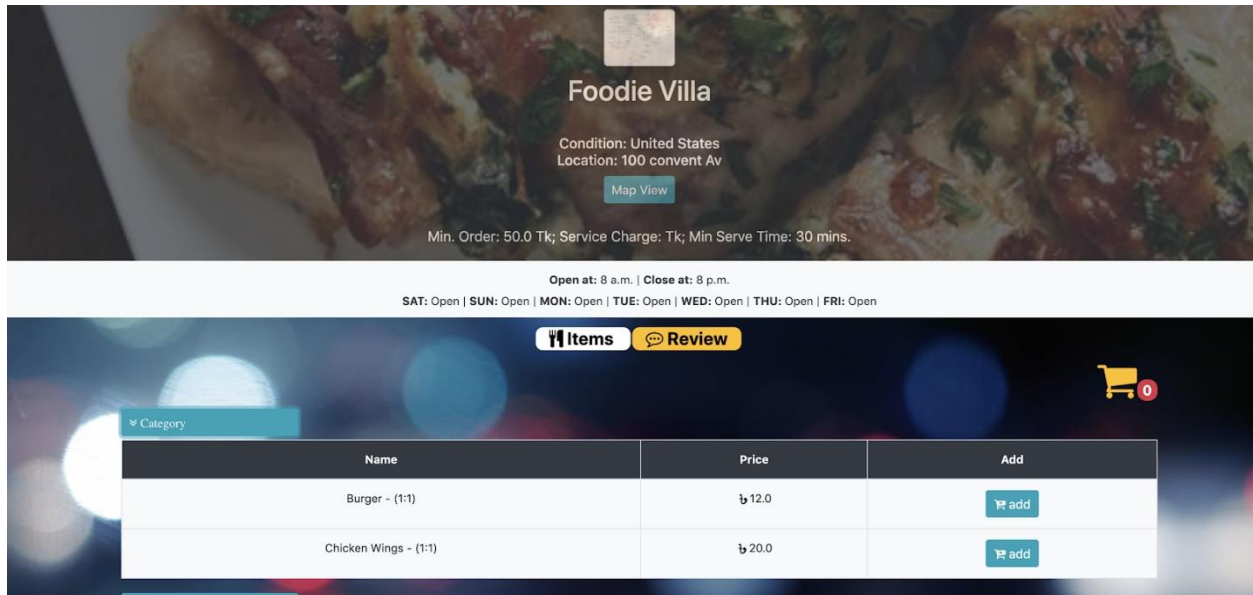

Restaurants You Can Order

Foodie Villa
Condition: United States
Address: 100 convent Av

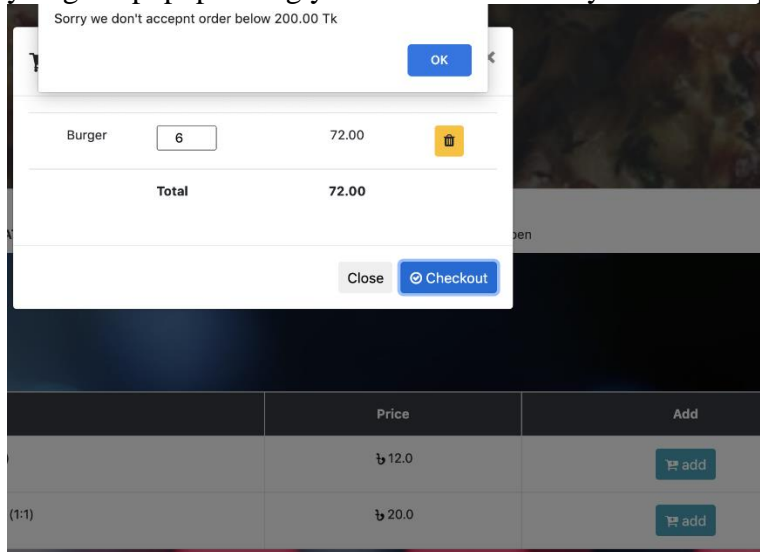

Then, once you select the restaurant you can move on to the next page which shows you the menu items. We currently have two items on the menu and obviously we can add more items, but we only put two things because of time constraints. This is how the ordering page looks:

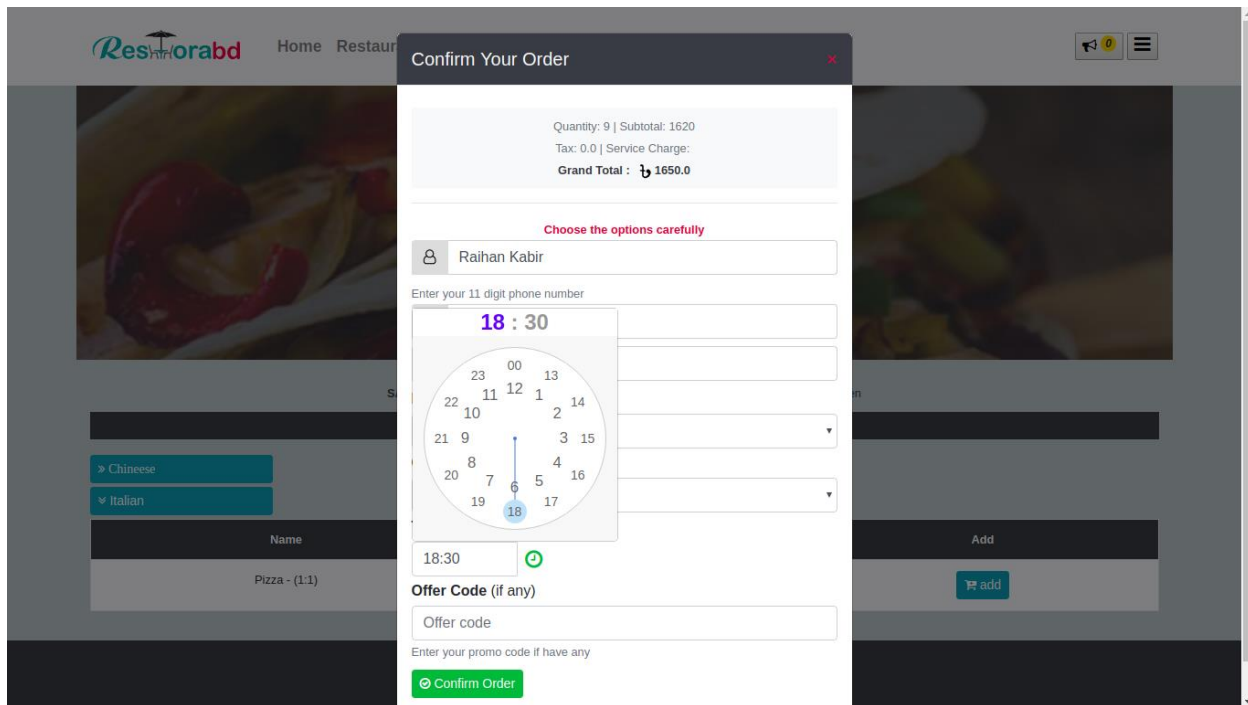

Feature 6

Most of our team members are international students so we chose to create an international restaurant, therefore the currency is different (in TK) and you can see the symbol next to price. We have a minimum you have to spend in our restaurant in order for the order to fill. Otherwise you get a popup telling you about how much you have to spend (in this case 200TK)

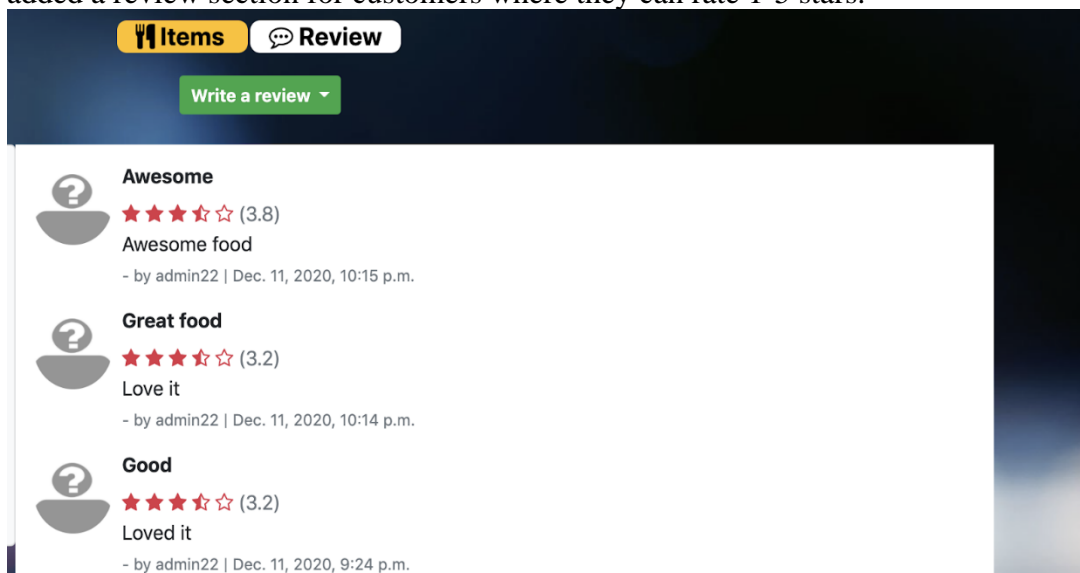

Feature 3

Next, you can click add to add these items to the cart and proceed onto selecting how you want your order and if you are eating in, delivering or picking up (these options are displayed under order type in the below picture). You can put address, payment method, and additional information as you can see below:

Feature 2 & Feature 4

We had a misunderstanding that complaint/compliment is the same thing as reviews so we just added a review section for customers where they can rate 1-5 stars.

Feature 5 & Feature 7

Now let's go through admin functions. We have accounts, where we can manage customer accounts. Registered customers having 3 warnings are de-registered. VIPs having 2 warnings are put back to registered customers (with warnings cleared). The warnings are displayed in the personalized page when the customers log in. Their accounts get deleted from here when they pass those 3 warnings.

You can also see that customers can request to be removed from the system, or be marked to be removed from the system. The manager can remove them from this page as well.

Feature 10

You can also see above we can manage chefs, food categories and menu items in food. We have a notification center where we see the orders we get. This is where we see the orders and the order information, for example we currently have one order:

Reshonorabd Home Restaurants Orders Blog

My Orders

#	ID	Payment	Status	Action
1	45	x	x	

f t YouTube

The x is for the payment is not made, so the status is also x.

We also spent a lot of time and effort making the website as aesthetically pleasing as possible, as you can see from all of the prior screenshots.

Feature 2

Next we have reviews for the chef. The chef whose dishes received consistently low ratings or 3 complaints, or no order at all for 3 days, will be demoted (less salary), a chef demoted twice is fired. Conversely, a chef whose dishes received high ratings or 3 compliments, will be promoted.

3 reviews Save

We can control orders or put in order information for a customer if they were to call and order under the “order category”. We have a “discount” category for our VIP customers who spent more than \$500 or placed 50 orders as registered customers, whichever comes first, in addition to the actions of registered customers, they will receive 10% discount of their ordinary orders.

Good restaurant...

★★★★☆ (4.8)

Me and my group went there so many times.... We enjoyed their services and food.
